Abstract

This recipe is used in the following protocols:

- Separation and purification of human PBMC from FRESH BLOOD
- Separation and purification of human PBMC from BUFFY COAT
- Magnetic bead-based CD4+ T cell isolation from PBMCs with Dynabeads: CD4 Positive Isolation Kit
- Magnetic bead-based TREG-TEFF cell isolation from PBMC with Miltenyi CD4+CD25+ Regulatory T cell Isolation Kit
- Staining of human PBMC or ISOLATED SUBSETS with Cell Proliferation Dye-eFluor™ 670 (CPD-eFluor670) for cell proliferation evaluation by Flow Cytometry

Phosphate-buffered saline (PSB 1X)

NaCl - 8 g (137 mM)

KCl - 0.2 g (2.7 mM)

Na₂HPO₄ - 1.44 g (10 mM)

KH₂PO₄ - 0.24 g (1.8 mM)

To prepare 1 L of PBS 1X, dissolve the reagents listed above in 800 mL of ultrapure H₂O. Adjust the pH to 7.4 with HCl or NaOH, and then add H₂O to 1 L.

NaCl code: S9625, Sigma

KCl code: P9541, Sigma

Na₂HPO₄ code: 1.06585, Sigma

KH₂PO₄ code: P0662, Sigma
